

A photograph of a modern rooftop garden. In the foreground, a planter box contains a plant with long, variegated green and yellow leaves. The ground is paved with grey rectangular tiles. In the background, a blue wall is visible, with several tall, thin plants in grey planters. A white pillar with a light fixture stands near the wall. The scene is lit with warm, golden light, suggesting late afternoon or early evening.

Microfolia

Tropical plants

Plants are an essential feature of a quality working environment, helping to create harmony and inspiration for staff and customers alike.

fabulous landscaping

Scientific studies carried out by NASA and other leading bodies have confirmed that plants can improve air quality, morale and productivity, while helping to combat stress, absenteeism and sick office syndrome.

For more than a decade, Microfolia has been providing tailored professional landscaping services for companies large and small across the South of England. We offer fabulous interior and exterior landscaping at prices to suit your budget.

Microfolia

Below right: Exotic Phoenix Roebellini and Chamadorea palms thrive in one of London's most prestigious hotels.

creating colourful work and leisure spaces

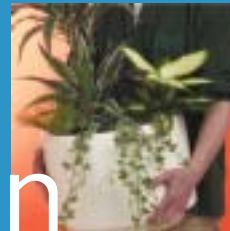

design

Design and planning are critical even for smaller offices, taking into account a range of key factors including budget, access, light, space and temperature. Microfolia often works closely with architects and designers to meet exacting specifications including trees up to eight metres.

Having agreed on a planting scheme, we will ensure that the installation is quick and efficient, while minimising mess and disturbance. We are happy to work after hours or weekends if this is more convenient.

installation

maintenance

Professional care, tailored to your budget, ensures that your plants always look at their best. Our liveried staff regularly feed, weed, water and clean, replacing plants that no longer contribute to your planting scheme at no extra cost.

We rent both interior and exterior plant displays for events such as parties, shows and exhibitions. We can also provide a range of quality Christmas trees – up to ten metres – even clearing up the needles!

hire

artificial plants

Sometimes, lack of light means that live planting is impractical. We can offer a range of superbly life-like artificial plants and trees, with natural wood stems and photographically reproduced leaves. Trees can be hand-made to order.

enhancing the working environment

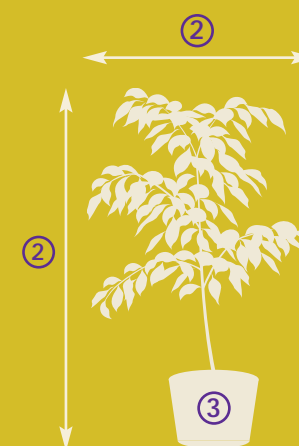

Above: Standard Ficus Longifolia planted in polished containers on castors allow flexibility in layout in this award winning headquarters building.

Right: The careful choice of plants allow this colourful planting scheme to thrive in a hostile, low light IT environment.

...and many more

Factors that are important in deciding what plants to place where:

- 1 the amount of light, natural or artificial, as well as the direction
- 2 size of plant, height and width of foliage
- 3 root ball and pot size
- 4 humidity or, more often, lack of it.

Interior planting can be rented inclusive of maintenance or bought with a maintenance package, depending on your needs and budget. Exterior landscaping would normally need to be purchased.

We are also happy to revive and care for existing plants that have been neglected or where you feel you are not receiving appropriate value or service.

If you would like to know how you can enhance your particular environment, please contact us to arrange a free survey, without obligation. We can also introduce you to existing clients so you can hear how good our service really is!
